PRAGUE

ICT in Education

Between the 21st -25th of May 2024, three teachers from our school took part in a training course in Prague, Czech Republic, ICT in Education. This was the first course which aimed to develop skills in the use of technology in teaching.

The teachers who participated in the course acquired the knowledge, skills, methods and teaching strategies that integrate technology effectively. They also learned how to use some educational applications, e-learning platforms and other digital resources that make learning more attractive and accessible for students. The course aimed to stimulate students' motivation and involvement. Teachers learned how to create interactive and engaging activities that stimulate students' interest and encourage them to actively participate in the learning process.

Participation in this course provided the opportunity to collaborate with teachers from other countries, facilitating the exchange of innovative practices and ideas. Through this interaction, teachers develop intercultural competences that help them appreciate diversity, promote an inclusive educational environment and prepare students for a globalized world.

Therefore, the ICT course helped the teachers of our college to identify and use educational resources, online materials that can enrich the curriculum and provide students with access to a variety of perspectives and information improving their professional skills that facilitate their contribution to increasing the quality of our students' education.
